

# INSTRUCTIONS

## Wet food - Single bowl feeding trial

### GETTING STARTED

1. Open the feeding data portal. Complete the pet health assessment. If pets are healthy, continue the trial as instructed. If not, follow the health assessment instructions.

2. Place empty bowl on scales.

3. Turn scales on and wait for scales to 'zero'.

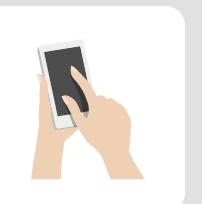

4. Entirely empty 2x food pouches into the bowl, which match the food instructed to be fed for that day. This should weigh approx. 160-170g.

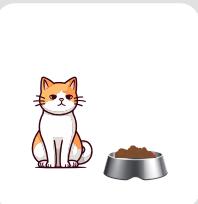

5. From the third pouch (of matching food code), gradually add/remove food to/from bowl until the bowl contains exactly 200g.

### HOW TO CONDUCT TIMED FEEDING

1. Prepare a countdown timer for 30 minutes.

2. Place the bowl of food on the ground for your pet to start eating.

3. Immediately note the time, record it, and start 30 minute countdown timer.

Wait 30 minutes

4. When 30 min timer alarms, pick up bowl of food, interrupting feeding if necessary.

5. Immediately note the time bowl was picked up, and record it.

### HOW TO WEIGH THE REMAINING FOOD

1. Turn on the scales.

2. Wait till scales zero.

3. Place bowl along with any remaining food onto the scales.

4. Record displayed weight as food left remaining.

Please note that it is intentional that this weight includes the weight of the bowl.

### AFTER FEEDING

- Ensure you have submitted the data correctly in the "Feeding data portal".
- Uneaten food can be offered again, outside of the 30 minute trial window, or stored for later use.
- Clean the feeding bowls ready for the next day/trial - they're dishwasher safe.
- Monitor your pets health throughout the trial.
